DETAILED ACTION

1. The terminal disclaimer filed on 10/13/04 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of *** has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,8,11 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Fowlkes (US Patent 6,361,163).

Regarding claims 1 and 11, Fowlkes teaches a transport path conveying a series of documents at a print velocity (44,46), an upstream print head (70a) contiguous with the transport to print on documents transported thereon, a downstream print head (70b), downstream of the upstream print head, and contiguous with transport to print on documents transported thereon (Figure 7) and a controller (220) controlling a first one of the upstream or downstream print heads to print on transported documents (30/40), the controller further switching to a second of the upstream or downstream print heads when the first one is out of service (Column 7, Lines 34-44).

Application/Control Number: 10/675,362 Page 3

Art Unit: 2854

Regarding claims 8 and 18, Fowlkes teaches wherein the controller switches from using the first print head to the second print head when a failure is detected in the first print head (Column 7, Lines 34-44).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2-7,9,10,12-17,19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fowlkes (US Patent 6,361,163) in view of Hayashi et (US Patent 5,829,895).

Regarding claims 2 and 12, Fowlkes teaches the method and apparatus claimed, however he does not explicitly disclose documents that are mail pieces and a postage meter coupled to the print heads, whereby postal indicia are printed on the mail pieces. Hayashi et al. teaches a method for printing indicia that discloses postal indicia that are printed on mail pieces and a postage meter coupled to a print head (Column 3, Lines 33-41).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention as taught by Fowlkes to include postal indicia printed on mail pieces and a postage meter as taught by Hayashi et al., since Hayashi et al. produces a visually appealing and a clearly readable image.

Application/Control Number: 10/675,362

Art Unit: 2854

Regarding claims 3,7,13 and 17, Fowlkes teaches drop-on-demand ink jet print heads (70a, 70b, Abstract and Column 4, Lines 51-64).

Regarding claims 4 and 14, Fowlkes teaches a printer that comprises a controller that performs maintenance operations periodically such as taking a print head that is in use out of service (Column 7, Lines 34-44).

Regarding claims 5,6,15 and 16, Fowlkes teaches the method and apparatus claimed, however he does not explicitly disclose wherein the maintenance operation is a print head wipe and print head purge. Hayashi et al. teaches wiping and purging during maintenance operations (Column 4, Lines 7-18). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention as taught by Fowlkes to include purging and wiping during maintenance operations as taught by Hayashi et al., since Hayashi et al. teaches that it is advantageous to purge and wipe in order to provide a debris free print head.

Regarding claims 9 and 19, Fowlkes teaches the method and apparatus claimed including a controller (220) that triggers print heads (70a,b). However, he does not explicitly disclose a sensor that detects a document approaching print heads. Hayashi et al. teaches a microswitch detector that alerts the printing mechanism when a mail piece is present (Column 4, Lines 11-18). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention as taught by Fowlkes to include a sensor as taught by Hayashi et al., since Hayashi et al. teaches it is advantageous to detect the presence of a mail piece in order to properly position the print mechanism for printing a clear, concise image.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marissa L Ferguson whose telephone number is (571) 272-2163. The examiner can normally be reached on (M-T) 6:30am-4:00pm and every other (F) 7:30am-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Hirshfeld can be reached on (571) 272-2168. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
